The path to **optimal health**,
wellness, & longevity begins
with your **DNA.**

**Partnering
with you to
maximize
patient
health &
well-being.**

Technology and innovation has given us the ability to evaluate patients in new ways that can lead to life changing results and disease prevention. Studies have proven that utilizing non-mainstream DNA testing can make a difference in health and wellness and has increased positive patient outcomes. Access to this type of patient testing and monitoring has been limited, but is continuing to evolve. I am extremely excited to bring this type of patient care to the Tri-Cities.

As a provider, I have wanted to make a difference, but have found it increasingly difficult in the current healthcare environment. Encompass 360 is my effort to have an impact on patient healthcare delivery and to help them to live their best lives. My practice is not meant to replace traditional primary care, but is simply a compliment to that level of healthcare. I want to be your partner, not your competition.

Do you have patients who are looking for ways to be better, do better, feel better, and positively enhance their lives? This is where I can be of assistance. I want to add value to your practice by helping you enhance patient care by:

- identifying concerns that have not presented with symptoms
- working towards better patient outcomes with alternative/complimentary treatments
- alleviating patient issues/symptoms by utilizing DNA information to aid in more targeted, proven individualized recommendations

Patient DNA Report

Our practice has exclusive access to DNA analysis software developed by a large group of MD-PhDs. Very few medical practices in the United States have access and are using this type of software. Each patient will walk through the following established process with Encompass 360:

- An initial evaluation by a physician and an epigenetic nutritionist and coach
- DNA testing with analysis of nearly 1 million single nucleotide polymorphisms (SNPs)
- Additional elective blood/microbiome/sleep monitoring testing if desired
- A review of a personalized DNA report and patient recommendations
- Monitoring of treatment & health progress action plan
- Access to continued physician support, coaching, and mentoring

Patient Enrollment

Encompass 360 has developed three tiers of care and range from \$160-299 per month, depending on the level of physician support needed by the patient.

“ I look forward to a professional collaboration with providers who share the desire to maximize on patient outcomes. Please feel free to contact me with any questions or for more information on how I can be of additional assistance.

– Rob Rogers, M.D.
