

Our Leader

Dr. Rob Rogers is a native of Bristol, Tennessee. He attended The University of Tennessee, Knoxville for his undergraduate degree and The University of Tennessee College of Medicine in Memphis for medical school. He trained in Emergency Medicine & Internal Medicine at The University of Maryland.

Rob Rogers, M.D.

Dr. Rogers currently practices Emergency Medicine in Bristol, Tennessee at The Bristol Regional Medical Center. He formerly worked at The University of Maryland and at The University of Kentucky where he carried the title of Full Professor of Emergency Medicine. He has won multiple teaching awards including the National Faculty Teaching Award from The American College of Emergency Physicians and the American Academy of Emergency Medicine.

As an innovative medical educator, Dr. Rogers created an international think tank of educators, called Medutopia in 2017. He also shares his knowledge on a monthly medical education podcast. Rob has taught medical education and faculty development courses all over the world.

In 2021, Dr. Rogers' passion shifted to educating patients. A growing dissatisfaction with modern medicine and the lack of appreciation for the individuality of patients led Dr. Rogers to develop and create a new medical practice. His increased frustration with treating disease and not effectively preventing illness, led him to discover a better way. He wanted to help patients reach their health goals and live healthier, happier lives. Out of this desire to make a difference, Encompass 360 was born.

encompass 360

The path to optimal health, wellness,
& longevity begins with your DNA.

We Only Have One Shot At Life

Let us help you be better, do better, feel better, and maximize on what you've been handed. We can't change who we are, but we can alter outcomes by knowing what our unique DNA holds.

The traditional approach to medicine is to be reactionary and treat illness as it presents itself. We believe that individuals can optimize their health and even prevent illness. This all starts with knowing your personal DNA makeup, identifying areas to target and treat, and tracking an individualized action plan that is made just for you.

Who Are We?

Our team of professionals led by Robert Rogers MD are amongst a very select group of medical practices in the U.S. utilizing a proven, exclusively licensed process developed by a group of MD-PhDs, data scientists, and engineers. We partner with patients to evaluate, analyze, and optimize their health, well-being, and longevity by evaluating their genetic makeup and making targeted, precise treatment plans.

How Are We Different?

Our team is not a replacement for your traditional medical practice visits. We believe this level of care remains an important and vital part of your health and wellness routine. Our role is to compliment the care you receive from your primary care physician. We can provide additional testing and recommendations not typically utilized in primary care.

Why Should You Do This?

We help make you a better you. It's that simple. This is an individualized approach to medicine. Treatment is not population-based, but instead developed according to your own genetic makeup. We help you identify what benefits you, what you should avoid, and how you can live a healthier, better, and longer life. This approach to your health has also been proven to reduce your out-of-pocket medical costs.

Patient Enrollment

Encompass 360 has made available three tier levels of care to best accommodate a patient's desire of services and physician support. These tiers include genetic and lab analysis, coaching, unlimited texting, ongoing mentoring and physician visits. For additional details, visit us online or email us.
